DETAILED ACTION

Claim Rejections - 35 USC § 102

1. Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Fry et al.

With regard to claims 1, 3, and 6, Fry et al (US Pat. No. 6,017,233) disclose an electrical connector comprising:

a plug connector (16) having a guide element (44) having a cam like form and rounded edges;
a mating connector (18, 20, 22) having a recess (58), the recess being dimensioned so that during an insertion process the guide element is guided into the recess and in an inserted state the recess is set apart from the guide element (Fig. 3)..

With regard to claims 2, 4, and 5, Fry et al (US Pat. No. 6,017,233) disclose a centering element (56) having a lug-like form and configured to cooperate with the mating connector (Fig. 3-5).

Response to Arguments

Applicant's arguments filed 10/01/2001 have been fully considered but they are not persuasive. With regard to rejection based on Fry, Applicants presented only arguments. They suggest that the prior art (Fry) does not teach a recess in the mating connector. According to Applicants, the recess is located on a retaining cap, not on the mating connector.

Examiner respectfully disagrees with this argument.

The invention claims the mating mechanism of the plug connector and the mating connector.

As it was shown in this office action, ~~the~~ Fry's mating connector includes components 18, 20, and 22. All of these components are utilized for mating as elements of the mating connector. Particularly, the "retaining cap" (r.n. 22) has a counterpart – the guide 44 of the plug connector. Hence, the element 22 with the recess, when taken with elements 18 and 20, is considered the mating connector.

The rejection based on ~~the~~ Kato has been dropped.
